General Information

This subsection covers the following topics:

- Prerequisites
- Installation Package
- Installation Steps
- Environment Variables
- Registry Modifications

Prerequisites

- **Memory**
  A running Entire System Server on Windows NT uses approximately 4 MB of main storage.
- **Disk Space**
  A complete version of Entire System Server requires 4 MB of hard disk space.
- **Operating System**
  The Windows NT operating system. At least version 4.0 with service pack 3 is required.
- **Other Software AG products**
  Entire Net-work version 2.1.0.2 or above.

  Note:
  The LU parameter must be set to **18,000** or above.

Installation Package

The installation file **npr.exe** is a zip file. It contains all files.

For some systems, the installation package is also available on ISO 9660 CD-ROM. The CD-ROM contains a complete directory structure which clearly indicates product and platform.

Installation Steps

- Execute **npr.exe** and unzip its contents to an install directory (e.g. **c:\tmp\npr_inst**)
- Go to this directory and execute **setup.exe** .
  The installation program will be started.
- You will be prompted for a product directory.
  The default is **c:\Program Files\Software AG\npr**.
- You will be prompted whether you want to install the SAP R/3 support as well.
  This can be marked even if currently no SAP R/3 support is necessary.
- All files will be installed. After this is finished:
- Reboot your system.
  This is necessary to make the new service and environment definitions available.
- Continue with the steps described in the subsection Setting up Entire System Server Components.

Environment Variables

Some environment variable are created or modified during the installation.

Environment variable	Explanation
NPRDIR	Directory of the Entire System Server installation.
NPRVERS	Version directory.
NOPDIR	Directory for Entire Operations modules.
NOPVERS	Version directory.
EOR_WORK	Entire Operations work directory.
RFC_INI	Full path name for saprfc.ini (required for SAP R/3)

Registry Modifications

The installation process of Entire System Server for Windows NT modifies the Windows NT Registry in the following ranges:

- Service definitions
- Event logging definitions
